

Aircrete and Apollo create a strategic cooperation for India's prefab construction market

Aircrete Europe (Aircrete) and Apollo Inffratech Pvt. Ltd. (Apollo) entered into a strategic cooperation agreement for Apollo to represent Aircrete's AAC machinery and technology solutions for AAC plants in the Indian market.

The two companies will collaborate on the increasing demand for AAC panel production plants in terms of new project sales and strategic local sourcing of equipment made in India. The partnership is a reaction on the rise in demand for building solutions in India that are based on panels, rather than just blocks, following the global trend of the increasing use of prefabricated elements in construction projects.

The concept of environment-friendly buildings, or green buildings as they are popularly known, is on high-demand in India. While the green building movement has been around globally since the 1970s, it has gained momentum in India only in the last couple of years and green buildings are increasing their footprint steadily. Therefore, there is a great potential for AAC panels which can adequately

satisfy social, commercial and industrial sectors' needs for fast, flexible and cost-effective AAC building system for India.

Apollo is one of India's premier infrastructure backbone companies providing international standards and global technological breakthroughs to the Indian infrastructure companies. With a committed and professional team in India, Aircrete is able to further grow its presence in the Indian market. ●
